March

# OUR DEAR PARTNER!

The number of implant and abutment systems on the market is growing exponentially which has its advantages and disadvantages. Due to this diversity, dentists and dental technicians must be increasingly prepared both in terms of instrumentation and expertise. The wide range of choices makes it difficult to know which abutment systems are the right ones. This research process consumes a lot of time, money, and energy. Additionally, because patients are impatient, they need an immediate solution, or they will go elsewhere.

**József Hajdú**  
founding owner,  
executive manager

In order to facilitate the search process, we have created our UNIFORM-design abutment system, which provides a simple and quick solution to all problems. Our UNIFORM abutments are designed to be perfectly adaptable to other systems and instruments. All abutments for implant systems have the same design at the labial part, but the connection is made to the implant with extreme precision. Our abutments are made from the highest quality materials, from reliable sources that are certified by the manufacturer of the materials. We offer more than 70 different geometries for cement-retained, screw-retained, and removable prostheses. We have a tailor-made solution for everyone and every case!
