April

*Let's celebrate Easter together
with our spring offers!*

OUR DEAR PARTNER!

József Hajdú
founding owner,
executive manager

We trust that spring will give you the energy you need to make the most of your work and give back the perfect smile to even more patients.

We are constantly innovating and developing our products so that you can work with high quality medical devices at the best possible price.

BIONIKA's new world innovation is based on the implant bite registration technique. The BIOPOZ bite acquisition heads determine the bite derived from the correct position of the jaw joints, which is the key to a successful and trouble-free bite adjustment. The procedure can be used to reliably determine the true central relation, which minimises the risk of ceramic and acrylic surfaces chipping and the likelihood of implant screw head rupture.

The use of appropriate instruments is essential for successful implant placement. If you are an implantologist, or if your patients come to your practice with an unknown implant in their mouth, the BIONIKA Travelling Screwdriver and Test Kit may be the solution! Our Travelling Kit contains the wrenches that are used for the most common implant systems.

If you have any ideas for improvement, do not hesitate to contact BIONIKA!

Zsolt Kovács
Operative Manager,
Professional Advisor

„For screw-retained dentures, one of the most common abutment types is the multi-unit. We can also use them in straight and angular cases. We recommend this abutment system for screw-retained restorations in a high percentage of cases.”

Balázs Rigó
dental technician
