## SPECIAL OFFER

From 01/05 to 14/06 2024

2024  
05  
May

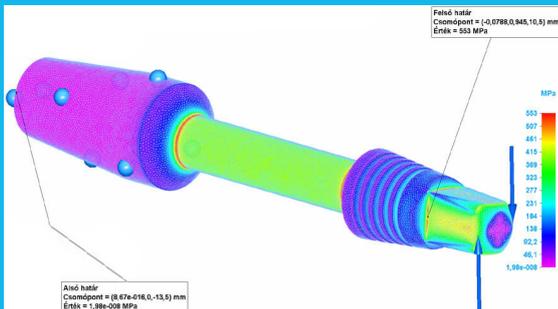

*Your satisfaction drives our success!*

# OUR DEAR PARTNER!

**József Hajdú**  
founding owner,  
executive manager

Digital simulation tools offer a proven solution that has been used for decades, allowing us to get an idea of the processes that take place during use, right from the initial stages of the product's life cycle. The use of finite element method systems allows for the preliminary verification of products, eliminating unnecessary prototyping and at the same time improving quality and reducing costs.

At BIONIKA, simulations are used to evaluate different design alternatives and perform behavioral experiments to accelerate and improve innovation. At BIONIKA, simulation is part of the product development process, giving insight into how products work in reality. The software used for the analysis makes it easy to identify stress collection points and dangerous cross-sections, allowing us to detect design flaws in time that we would otherwise overlook. For 35 years, BIONIKA has been continuously improving its technology and processes to provide its partners with the highest quality products and services.
