LEARN MORE ABOUT OUR MULTI-UNIT ABUTMENTS!

Nowadays, there are many different methods for replacing lost teeth. Instead of removable prostheses, which were more

popular with patients in the past, more and more people are now opting for fixed screw-retained solutions which offer greater comfort, stability and a more aesthetic appearance. Screw-retained solo crowns and bridge replacements are favored by professionals and patients alike, as they are easy to

keep clean, provide a secure solution and offer reliable and long-lasting results. The BIONIKA range includes snap-in, cement- and screw-retained abutments. Among the screw-retained solutions, one of the most common abutment types is the multi-unit abutment which has the greatest advantage of being suitable for both straight and angular cases. This type of abutment is usually used for the fixation of dental prostheses based on 4 or 6 implants. The inclined version of the multi-unit head is particularly useful in cases where the implant is not ideally angled in the mouth as it allows for accurate fit and stability even in cases with an unfavorable implantation angle. Multi-unit heads by BIONIKA are available in a wide range of diameters and sulcus, so that everyone can find the solution that best suits their needs.

BIONIKA MULTI-UNIT HEADS FOR ALL BRANDS

5+1

package offer for
Multi-unit heads

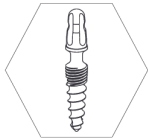

Multi-unit heads (also known as bar-retained) are one of the most common types of abutments for screw-retained prostheses. They can be used in both straight and angular cases. In a large percentage of cases, this abutment system is recommended for use with screw-retained restorations.
