A SOLUTION FOR EVERY SITUATION!

The products manufactured by BIONIKA are constantly being improved to ensure that you can work with high-quality, European-made medical devices at competitive prices. We offer a wide range of tools to help you achieve perfect restoration, as well as a comprehensive selection of implant systems to address all dental cases. The SPEEDY one-phase implant system is one of the most suitable if the patient needs a quick, immediate load solution.

József Hajdú
founding owner,
executive manager

The ACTIVAL two-phase implant system has been developed to meet the needs of NobelCC®, Implant Direct® and Callus® users to promote the efficiency of their procedures. In addition to the BIONIKA implant systems, within the UNIFORM range, dentists can choose from over 100 different abutment geometries, ideal for cement-retained, screw-retained or snap-in restorations. The ball attachment and locator implants used for removable prostheses provide maximum stabilization of the different prostheses and ensure a precise fit, thus contributing to the durability and comfort of the prosthesis for the patient. Our abutments are compatible with various brands, making them suitable for a broad selection of implant systems. This makes it easy for you to find the best solution for whatever clinical challenge you face.

Zsolt Kovács
Operative Manager,
Professional Advisor
