2024 12

December

MERRY CHRISTMAS!

WELCOME HAPPY HOLIDAYS!

József Hajdú
founding owner,
executive manager

Christmas is a time of togetherness and love. The feeling of gratitude is even stronger during this time of year, as it reminds us of the importance of appreciating all that we have. We would also like to take this opportunity to thank you for the gift you have given us all year: your trust in our expertise and the honor of buying and using BIONIKA products. Thanks to our dedicated Partners and our continuous innovation, we have grown over the decades to become the country's leading and most popular medical device manufacturer. We know how time-consuming it is to find a reliable and suitable dental implant and abutment manufacturer today.

That is why we would like to ask you, if you can, to recommend BIONIKA products so that more professionals can experience their advantages and benefits in the future. We would like you to know that you can fully rely on BIONIKA's quality products and services for the coming year as our quality-of-life tools are designed to help you succeed in your work and to make your patients happy. Thank you for being with us this past year. May the New Year bring you and your Family much joy and happiness! We wish you a Merry Christmas and a prosperous New Year!

Zsolt Kovács
Operative Manager,
Professional Advisor

ANCORA

The BIONIKA ANCORA system includes mini-implants specially designed for orthodontic treatment. The implants are available with self-incision and self-compression threads, with three different head designs:

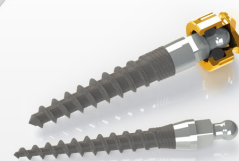

- ball head
- slotted head
- hole head
- dual screw head

NANOPLANT

The BIONIKA Nanoplant Implant System can be used for harder and thinner than average bone structure, both for snap-in and cement-retained restorations. The Nanoplant Implant System comprises two types of single-phase implants:

- MX- For the softer maxilla bone structure with higher thread height
- MD- For the harder mandibular bone structure with a thin thread edge

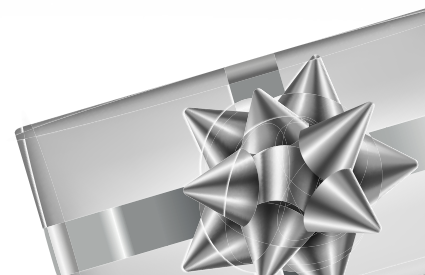

MDI

For harder than average and thin bone structure, for snap-in prostheses.

- Minimal invasive intervention - transgingival surgical option
- Flexible tooth contact
- High primary stability - immediate "loadability", screwed into the jawbone with a torque of over 35 Ncm
- Imtec MDI compatibility
