## SPECIAL OFFER

From 01/02 to 15/03 2025

2025  
02  
February

*With You for 36 Years!*

# WELCOME

For 36 years, we have been dedicated to your professional success!

It has been our honor to support the work and goals of implantologists over the past 36 years and dental technicians since 2016 through the BIONIKA Milling Centre.

We sincerely thank all our partners for their trust and collaboration throughout these years! Our commitment to providing high-quality reliable services continues. We remain dedicated to supporting your success with innovative and efficient solutions.

The BIONIKA DentCAM Milling Center leverages the advantages of CAD/CAM technology, offering faster turnaround times and exceptional accuracy.

Industrial CNC technology enables implant restorations to be produced with far greater precision and detail than traditional methods. Our dental technology services include framework design, carving, grinding, finishing, and even custom abutment fabrication.

These services are also available to those without their own scanner. By submitting a plaster sample, you can still take advantage of CAD/CAM technology and save valuable time, which can be better spent on aesthetic finishing.

Our goal is to make the work of professionals not only easier but also more efficient through our innovative solutions and personalized services. Your success is our success—that's why we consistently strive to remain at the forefront of the dental and prosthetic profession.
