## One System, infinite possibilities

Did you know that the BIONIKA CORTILOG implant system covers every dental implant cases? Whether you're looking for mini, one-phase, two-phase, or temporary solutions, the versatility and compatibility of the CORTILOG system ensure successful treatments. CORTILOG implants are designed with a single purpose: to make implantation procedures simpler, more efficient, and more successful while providing patients with long-lasting, aesthetic, and natural-looking restorations. Members of the implant family also offer solutions for low bone availability, narrow spaces, or specific clinical cases. The CORTILOG PCL SHORT implant can be successfully used even in cases of low bone height, while the CORTILOG MCL implant offers immediate loadability for your patients.

## CORTILOG IMPLANT SYSTEM

### What makes CORTILOG so versatile?

- **Innovative technology:** Micromovement-free force transmission and precise impression-taking enable accurate prosthetic restoration.
- **Compatibility:** CORTILOG PCL is compatible with Camlog®, and CORTILOG CCL aligns with Conelog® connection systems—making them seamlessly integrable alongside your existing tools.
- **Collaboration between dentists and engineers:** With more than 28,000 products, BIONIKA has contributed to the development of the dental profession, ensuring world-class quality and continuous innovation.
- **Excellent value for money:** Premium quality at an affordable price—offering a competitive alternative for professionals. Discover how BIONIKA implants can support your work, and join the growing number of experts who trust the advantages of CORTILOG!

## TCL

The non-sandblasted surface delays full osseointegration, allowing safe removal of temporary implants before final prosthesis placement.

## CCL

Tapered connection ensures micromovement-free force transmission and provides favorable conditions for precise impression-taking.

## LCL

Simplifies the surgical procedure-no need to uncover deeply placed implants.

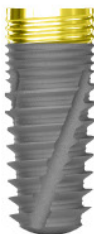

## PCL

Tube-in-tube connection with a flat platform. The three-notch design guarantees an exact, rotation-proof connection.

## ECL

The polished, non-sandblasted portion of the implant can be inserted into the soft tissue-ideal for patients with low bone availability.

## DCL

The implant body and head form a single geometry, allowing it to be used as a one-phase implant.

## DCL

The implant body and head form a single geometry, allowing it to be used as a one-phase implant.
