April

*We wish you a
Happy Easter!*

WELCOME

It is not enough to find the perfect implant system; the use of proper instruments is essential for successful implantation. Keeping partners' needs in mind, BIONIKA strives to develop products that best meet modern medical technology requirements. Our dental instruments simplify surgical procedures, allowing you to focus more on your patients' needs.

József Hajdú
founding owner,
executive manager

BIONIKA kits ensure perfect performance during implant treatment procedures. These sets were created to make the insertion and removal of screws, implants, and abutments simple. If patients come to you with an unidentifiable implant, the BIONIKA kit is indispensable—it contains the drivers for the most common implant systems found in the European market.

The ratchet torque wrench is suitable for tightening screws to a specified torque and for inserting implants. With a pre-set torque, it ensures optimal force transmission during implant placement. The torque can be adjusted between 15–35 Ncm. By tightening the adjustment screw fully, the torque can be set to infinite as well.

Nowadays, not only do patients travel to their doctors, but implantologists often travel to their patients or partner clinics, where they may face challenging situations. BIONIKA supports you in being well prepared for these cases with its instrument kits.

Zsolt Kovács
Operative Manager,
Professional Advisor

The BIONIKA Medline Ltd. „is among the most reliable 0.63% of companies in Hungary.“
