Medical device manufacturers have to comply with a number of health and legal requirements. The MDR (Medical Devices Regulations) Regulation, which came into force in the European Union on 5 April 2017, imposes much stricter requirements on manufacturers in order to increase patient protection and improve the quality of devices. Manufacturers will have to collect and present much more objective data to continue marketing their products in EU countries. One important method of data collection is clinical trials, which assess the safety and performance of medical devices.

ügyvezető igazgató

BIONIKA has selected the CORTILOG implant system from its portfolio of existing systems to carry out the clinical study. **CORTILOG's wide range of products, including mini, one-stage, two-stage, and temporary implants,** is an excellent reflection of all the implant brands manufactured by BIONIKA, which are **all compliant with EU medical device directives.**

Our aim is that the results of clinical trials will confirm the overall safety and compliance of the CORTILOG implant system with the new legislation and requirements, as we have proven on numerous occasions over the past years.
