WELCOME

Professionals who have recently started in the field of implantology rightly ask the question: which type and brand of implant would be the best choice.

It is not surprising because a huge number of foreign systems enter the domestic dental implant market every year. BIONIKA as a Hungarian manufacturer strives to develop devices that meet the needs of professionals and are tailored to the individual patient. What can a Hungarian SME offer that a multinational company cannot? A lot!

- Many people don't realize that Hungary, although small in size, is a highly innovative country as evidenced by the many world-renowned Hungarian researchers and inventions. BIONIKA's mission is to develop unique, tailor-made, high quality devices that contribute to curing patients and improving their quality of life.
- BIONIKA places a strong emphasis on compliance with local and international regulations, ensuring that the medical devices you receive meet all the necessary safety and quality standards.
- In conclusion, if you choose BIONIKA, you will get the products you need from a highly innovative and creative Hungarian company with high quality production. We can also satisfy the need for tailor-made products, and we focus on complying with regulations and standards.

Remember, BIONIKA gives a face to their products.

BIONIKA Medline Orvostechnikai Kft.
„belongs to the top 0.63% of Hungarian
companies.”

How to order from the webshop

1

Visit our webshop

For faster and more trackable shopping, it is advisable to register first. By shopping with your own account, you can save time by not typing your details repeatedly.

2

Find the product you want to buy

To find the products you need easily, it is advisable to use the filter on the left side of the webshop, but you can also use the menu bar on the main page to find the products easily you need.

3

Select product parameters

Once you have found your product, select its compatibility and quantity. Then select the product diameter, sulcus size and whether it has an anti-rotation or not.

4

Help you choose the parameters

Can't you decide the implant diameter? Enter the reference number or diameter of the implant in a comment or send an X-ray image to info@bionika.hu.

5

Add to cart

You can add the product to a virtual shopping cart by clicking on the "Add to cart" button. By clicking on the "Cart" button you will find the products you have added to your cart. Here, you can double check your order, in particular the prices and quantities. You can modify or correct as required. The shopping cart will automatically calculate the total amount of your order.

6

Checkout

If you are satisfied with the quantity of the products in your shopping cart and have checked the total amount, simply click on the "Checkout" button. In the next step, select the delivery method and payment method that suits you. If you agree with the contents of your order, click on the "Submit order" button to send your order.

7

Delivery

We will deliver your order as soon as possible to the address you have provided. We also offer the possibility of personal pick-up at our premises.

TITANIUM BASE

The Titanium base (also known as zircon base) is a screw-retained abutment related to modern CAD/CAM technology. A zirconia cap or crown, designed individually using CAD software, is placed on the titanium base. The titanium base is dental cement bonded to the finished restoration with dental cement dental cement. The tooth, bonded to the abutment, can be fixed to the implant with a head screw. In the case of a single tooth, the anti-torsion version can be used, and in the case of a multi-unit bridge, it is recommended to use at least one antirotation abutment.

ZIRCONIUM HEADS

This material can be machined easily and the aesthetic appearance of it is high. This is the best solution for metal-free tooth augmentations. It doesn't cause any allergic reactions for the patient. Due to its high solidity, complex circle bridges can be made from it. It advantageously eliminates the unpleasant and harmful galvanic effects which is a typical feature of metals.
