September

WELCOME

Trends in implant dentistry change from year to year. Contrary to previous beliefs and experience, clinical studies have now proven that the success and raison d'être of smaller-than-average dental implants is unquestionable. Single-phase and mini implant solutions are mostly used where space is limited

József Hajdú

founding owner,
executive manager

and where the orovestibular dimension of the bone is insufficient. The requirements for these types of dental implants are similar to those for their full-size counterparts. Therefore, load-bearing capacity, soft and hard tissue preservation solutions and the prosthetic choice for the implant must be considered for long-term success. The single-phase and mini dental implants (including two-phase versions) developed, manufactured and marketed by BIONIKA meet all professional requirements, demands and needs.

What do BIONIKA single-phase and mini implants offer you?

- a minimally invasive implantation option,
- prosthetic variability,
- the possibility of axis correction,
- adaptation to gingival height,
- high load-bearing capacity and mechanical strength,
- soft and hard tissue preservation solutions,
- aesthetic compliance,
- appropriate platform switching,
- corrosion resistance,
- immediate load capacity.

SPEEDY

- The flexible under-neck platform switching, with RadialFix grooves
- Radial thread crest design
- High pitch
- High thread depth
- Tapered, self-compressing thread to match the natural tooth root
- Thin, pointed, tapered end
- Flexible head design

The **SPEEDY** system is the ideal solution for cement-retained prostheses. Thanks to their outstanding characteristics, they can be used successfully with both medium-hardness and softer bone structures.

Satisfying the minimal invasive requirement, the surgery can be performed from a small incision, possibly transgingivally. The same characteristics make it the most optimal construct for immediate loading. Its flexibility makes it particularly suitable for the retention of temporary prostheses.
